Antenna free Marina WiFi is here

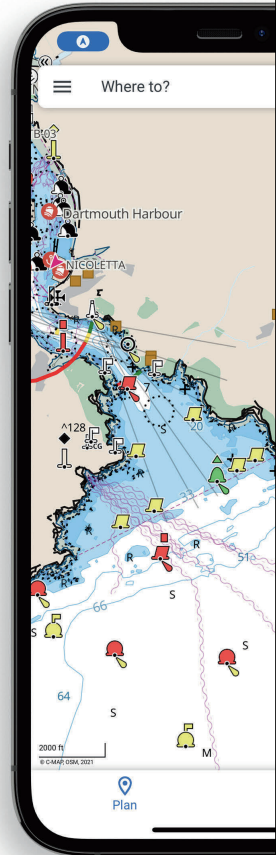

Clean, simple, effective...

Our new system delivers strong and stable WiFi to all berths without the need for antennas on poles.

Individual WiFi Access Points send 250Mbps to over 100 connected devices on every single berth. That's more than enough for system updates, downloads, navigational use and entertainment – all at the same time. The connection is through cable, not wireless bridging, so the signal remains stable and delivers the best possible speeds across the whole area.

Single sign-in; once a network user has signed in for the first time, the system will connect the user automatically whenever they return. This is a world-first, and we are currently installing this ground-breaking system at marinas across the country.

Marina WiFi

from ClubWifi

THE SPECIFICS

100% WiFi coverage across your Marina

Using infrastructure already in place to mask the network, providing perfect signal with no unsightly antennas.

Up to 250Mbps per berth

More than enough for updates, navigation and entertainment without interruption.

Secure and simple SSID network with one-time login

WiFi automatically connects whenever they berth – the system remembers the onetime password, to all wifi devices.

24/7 Club Wifi support

Technical support and customer services is easily accessible and available.

Secure Independent connections

Every device has its own individual connection, so no network sharing and secure at all times through the ClubWifi servers.

CASE STUDY

Sutton Marina

- PLYMOUTH

Mark Brimacombe - Marina Manager

“ We have had many WiFi suppliers promising all sorts of deliverables, I can honestly say – the ClubWifi Solution is absolutely amazing, we have no unsightly antennas on the berths and pontoons, its like magic!

The feedback from our berth holders has been fantastic, with everyone now watching Netflix and streaming content regularly. After a week onsite ClubWifi have done an amazing job and you would not know visibly we have wifi – just connect once - its that simple. I cannot recommend ClubWifi highly enough. ”

CASE STUDY

The Marine Group

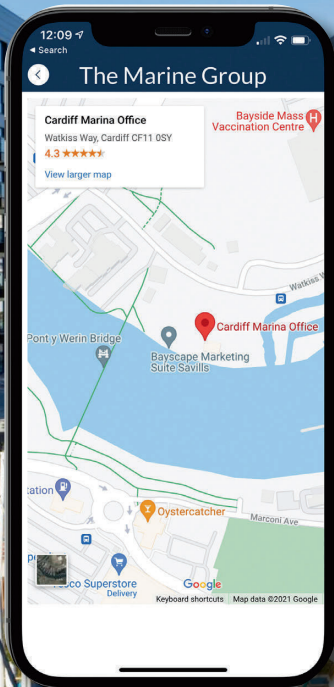

- CARDIFF MARINA

Andy Coles MBE - Marina Manager

“ We wanted to put in a new and efficient WiFi, but due to the nature and layout of the marina we were not sure what we needed and got different answers from different suppliers. Club Wifi took the time and effort to visit the site, talk through all the options and made sure the Wifi would more than match our needs. ClubWifi installed the network within a couple of days and everything worked perfectly.

The system was checked several times and handed over so that we knew exactly how it worked and who to contact should we have an issue. Their post fit support to both us and our customers has been superb.

We also have an APP that has been developed to easily communicate to our berth holders and visitors - providing up to date information quickly. A great company to work with.”

Network Security

Keeping users safe and secure

It is vital to us at ClubWifi, that all public network users remain safe when using the internet. All our networks have content filtering and safe to surf solutions in place. Each connection is individual and is managed through the ClubWifi Servers at all times.

The UDM PRO also acts as a secure Firewall as well as a digital CCTV solution. This is also capable of handling door entry systems all in one.
